

Harpuneet Singh

Toronto, ON | 437-335-7184 | harpuneet.singh@torontomu.ca | github.com/fadeddart | LinkedIn | Portfolio

EDUCATION

Toronto Metropolitan University

Toronto, ON

Bachelor of Science in Computer Science (Co-op)

Sep 2024 – May 2028

- **CGPA:** 3.90 | **Dean's List:** Fall 2024, Winter 2025, Fall 2025, Winter 2026
- **Coursework:** Data Structures & Algorithms, Database Systems, Object-Oriented Design, Software Engineering

TECHNICAL SKILLS

Languages: Python, SQL, JavaScript, Java, C/C++

AI / Data: FastAPI, BM25, TF-IDF, information retrieval, evaluation harnesses, pandas

Tools & Platforms: Docker, Git, GitHub Actions, Linux, PostgreSQL, Prometheus

Concepts: RAG, Information Retrieval, Data Pipelines, Testing, Agile, System Design Basics

EXPERIENCE

Student Developer

May 2026 – Present

Toronto Metropolitan University

Toronto, ON

- Delivered internal web applications that streamlined staff workflows from requirements through UI implementation and iteration
- Partnered with stakeholders to translate operational needs into structured features; validated behavior with testing and feedback loops

Accounting Assistant

Jan 2026 – May 2026

HNM Logistics

Mississauga, ON

- Built Python scripts to process and validate multi-thousand-row operational/financial datasets for recurring reporting
- Automated brittle spreadsheet workflows and flagged anomalies before close, improving reporting reliability

FEATURED TECHNICAL PROJECTS

ATLAS — RAG Knowledge System + Eval Harness | *Python, FastAPI, BM25, TF-IDF*

GitHub

- Built a production-style RAG system (ingest → hybrid retrieve → cite) with a **54**-question evaluation harness
- Raised retrieval doc-precision from **0.52** (BM25-only) to **0.62** (hybrid); **47/54** cases passed at **0.92+** faithfulness
- Added query caching with TTL and latency telemetry; documented Azure OpenAI / AI Search deployment path

FORGE — DAG Workflow Engine | *Python, FastAPI, asyncio, Docker, Prometheus*

GitHub

- Designed a concurrent DAG workflow engine for reliable multi-step data/job pipelines with retries, DLQ, and stuck-run recovery
- Sustained **7,000+** task completions/min under load tests; exposed Prometheus metrics for queue depth and task completions

AEGIS — Fuzzing & Vulnerability Discovery Harness | *Python, C, Docker*

GitHub

- Built an automated fuzzing pipeline that discovers and deduplicates parser defects with minimized PoC inputs for lab targets
